Power plant capacity (MW)

The chart displays the projected electricity generation capacity in TWh by source from 1950 to 2070. The x-axis represents years from 1950 to 2070 in 5-year increments. The y-axis represents capacity in TWh, ranging from 0 to 100. The legend identifies the following sources: wind onshore (light blue), solar PV (yellow), solar CSP (orange), others (grey), nuclear (light yellow), natural gas (ST + CT) (teal), natural gas (CC) (cyan), hydro (dark blue), heavy fuel oil (dark red), coal (black), and biomass (green). The chart shows a steady increase in capacity until the early 2000s, followed by a rapid growth phase starting around 2020. By 2070, wind onshore and solar PV are projected to be the dominant sources, accounting for approximately 75% of the total capacity.
