The chart displays the projected electricity generation mix in the UK from 2015 to 2070. The y-axis represents the percentage of electricity generated, ranging from 0% to 100%. The x-axis shows the years from 2015 to 2070 in 5-year increments. The legend identifies the following energy sources: wind onshore (light blue), solar PV (yellow), nuclear (orange), natural gas (ST + CT) (teal), natural gas (CC) (light blue), hydro (dark blue), heavy fuel oil (dark red), and coal (black). The chart shows a steady decline in fossil fuel generation (coal, heavy fuel oil, and natural gas) and a corresponding increase in renewable energy (wind onshore, solar PV, and nuclear). By 2070, wind onshore and solar PV are projected to be the primary sources of electricity, accounting for approximately 80% of the total generation.
